Tray: 22 1/4" (56cm) Weight: 100lbs (45.38kg)

The MiniFill 1500 allows any small or medium bottle operation to bottle 500ml bottles with optional magazine to fill 355ml, 1 liter and 1.5liter bottles.

Small bottles are manually snapped into a bottle magazine holder. Once secure, the user simply pulls the rotating arm forward and positions the bottle in a downward position ready for rinsing. Push the manual button and rinse the bottles with pure water or with an optional ozone feature. Once rinsed, the user turns the rotating arm and flips the bottles to the upright position ready for filling. An automatic button fills the complete rack of bottles in approximately 20 seconds (500ml size). Caps are then placed on bottle ready to be labeled and boxed if so required.

The MiniFill 1500 is constructed of high-grade stainless steel. Its 24 volt requirements make it safe and economical. A standard 1 1/2" PVC drain fulfills the plumbing requirements.

The MiniFill 1500 is designed to fill 12 bottles at one time. The average amount of time to rinse, fill, cap and lable 25 cases of water is approximately 1 hour (500ml size)

Enter into the small bottled water economically by purchasing a MiniFill 1500 small bottle rinse and fill system.
